

Georgia COVID-19 Dashboard – What's New?

Update Schedule

Beginning June 2, DPH moved to a once a day Daily Status Report update at 3 p.m. This allows time to process and validate laboratory and case reports to improve data quality and accuracy. DPH is regularly reviewing and updating features of the dashboard to provide a true picture of COVID-19 in Georgia.

New/Updated Site Features

- There are new graphs displaying cases, deaths and hospitalizations by race and ethnicity.
- There are additional files available for download that include county level data over time, PCR laboratory testing data, and new demographics data. A description of the files (*Covid-19 Download Data Description.pdf*) can be found in the downloaded zip file.
